WHAT IS BIZ TOKEN?

BIZ Token is a blockchain-based cryptocurrency powering decentralized applications (dApps) within the BIZ Token Ecosystem. It serves as the native utility token for both centralized and decentralized financial services on our platform.

Built upon a secure, transparent, and scalable blockchain infrastructure, BIZ Token is designed to support a wide range of financial transactions and services while ensuring efficiency and trust in every operation.

WHAT IS A BLOCKCHAIN NODE?

A blockchain node is any computer that connects to a blockchain network. Its main job is to store, verify, and share all the data on that blockchain—like transactions, smart contracts, and blocks.

Every node has a copy of the entire blockchain ledger. When new transactions happen, nodes check and confirm the information to keep the network secure, transparent, and decentralized.

Why Nodes Matter?

- ✓ **Security:** More nodes = harder to hack or manipulate.
- ✓ **Decentralization:** No single authority controls the system.
- ✓ **Verification:** Nodes make sure all transactions are valid.
- ✓ **Consensus:** Nodes agree on the correct version of the blockchain.
